

TREE TAG

What do you need?

A big open space bordered by trees

A large group of friends or classmates

Someone to moderate the game and choose which trees are 'safe'

What do you do?

1. Observe the trees in the area.
Pick a species of tree that is a 'safe' tree. As long as you're touching a 'safe' tree you can't be tagged and become 'it'.
2. Choose one person to be 'it' to start off with and begin to play when the moderator says 'go!'
3. The moderator must keep changing what the 'safe' tree is to keep you on your toes!

DISCUSSION

Talk about the trees you've encountered while playing tag. Use what you've learnt to make new categories of trees that can be 'safe' trees. E.g. all trees that have red fruit or all trees with homes for birds.
